PROFILE

Data Analyst with internship and freelance experience delivering insights across retail, e-commerce, and financial trading domains. Analysed multi-million record datasets using SQL, Python, Power BI, and Excel to surface trends and support business decisions. Comfortable working end-to-end — from raw data cleaning and transformation to stakeholder-ready dashboards and reporting.

SKILLS

Visualization & Reporting: MS Excel, Power BI, Tableau
Programming: Python (Pandas, NumPy, Scikit-learn, Matplotlib, Seaborn), SQL
Databases: MySQL, PostgreSQL
ETL & Automation: Power Query, Python Automation, DAX
Analytical: Data Cleaning, Data Modelling, Statistical Analysis, KPI Reporting, Machine Learning (Basics)

EXPERIENCE

Business Intelligence Analyst Intern

April 2026 – May 2026

Webskitters

Kolkata, India

- Constructed an multi-page Power BI dashboard analysing 50K+ retail transactions, providing visibility across sales, inventory, store performance, and demand forecasting.
- Designed 3+ KPI dashboards, time-series trend analysis, and forecasting models to surface revenue patterns and reduce inventory decision lag.
- Automated data cleaning and transformation workflows using Power Query, DAX, and Python, reducing report preparation time 60%.

Freelance Data Analyst / Power BI Developer [View on GitHub](#)

January 2026 – February 2026

Self-Employed

- Developed and deployed a client-facing Power BI dashboard to monitor live trading performance, capital growth, and risk metrics.
- Wrote 8+ DAX measures covering Win Rate, Risk %, Risk-Reward Ratio, Net P&L, and MoM analysis to enable real-time performance tracking.
- Engineered an automated Excel-based trading journal with data validation and conditional formatting, cutting manual entry time by 70% and improving profit booking consistency by 15%.

PROJECTS

Retail Sales & Inventory Analysis | *PostgreSQL* [View on GitHub](#)

- Examined 1M+ records across 50+ stores and 40+ products; found top categories drove 40–50% of total revenue, informing stock prioritisation.
- Uncovered high-impact stockout and overstock patterns; delivered recommendations that aligned inventory levels with demand and reduced potential revenue loss.

Customer Segmentation Using RFM Analysis | *Python* [View on GitHub](#)

- Performed RFM analysis on a 500K+ transaction e-commerce dataset to segment 4,300+ customers into High, Mid, and Low Value tiers using quantile-based scoring.
- Constructed a data cleaning pipeline to handle 3+ data quality issues : null values, cancellation invoices, and net-returner customers before segmentation.

E-Commerce Sales Analysis | *MySQL* [View on GitHub](#)

- Diagnosed \$2.42M in total revenue; identified 60%+ sales concentration in top categories and flagged a ~20% return/cancellation rate.
- Delivered insights on customer retention risk and operational gaps through SQL analysis and Power BI visualisation.

Executive Sales Analysis Dashboard | *Power BI* [View on GitHub](#)

- Developed a centralised Power BI dashboard with 5+ report pages tracking YoY growth, MoM change, and regional contribution, replacing fragmented sales reports.
- Surfaced key trends: 17.7% YoY growth, 3.8% MoM increase, 99.37% repeat customers, and West region contributing ~32% of total sales.

Retail Sales Analysis | *Excel* [View on GitHub](#)

- Analysed 13.12M+ records across 50 stores; identified 24.6% YoY sales decline and 32.9% profit drop, pinpointing margin gaps by category.
- Created interactive dashboards tracking inventory (29K+ units), AOV (17.57), and category-wise performance, flagging 71% low-stock risk and high-margin opportunities (up to 70%).

EDUCATION

BSc in Mathematics

West Bengal State University

August 2021 – June 2024

CGPA: 8.80 / 10
